RUBBERSHIELD® is a revolutionary scratch and petrol resistant coating. It is designed to finish surfaces which are coated first with RUBBERcomp® rubber coating. RUBBERshield® laminates and bonds efficiently with the previous rubber layer. RUBBERshield® remains flexible and stretchy over time, and will not crack or become brittle in extreme weather conditions. The hardness, scratch resistance and the solvent resistance of RUBBERshield® coating can be compared to original automotive 2-component clear coats. Tested and proven in temperatures from -30°C to +90°C.
